

## Roller Bars, Mechanical with spring pack loads up to 66 kN/m

### Advantages

- Easy and safe die change
- No hydraulic supply required
- Variant program with many selection possibilities
- Variable length in a single piece design up to 2900 mm
- Slot depth, roller spacing and bar length configurable for every application
- Low weight (version in aluminium)

### Application

- In T-slots and rectangular slots of the press bed for easy die change without any problems
- Die change streamlining

### Delivery

- Roller bar
- Wedge lock (option)

### Description

Roller bar with spring pack for medium loads and flexible horizontal movement of the dies. When preloaded, the rollers project over the bed level by up to 2 mm. When the die is clamped, the rollers are pressed into the bar body against the spring force until they are flush with the bed level.

### T-slot tolerances as per DIN 650

### Technical data

Max. load	[kN/m]	66
Roller spacing and orientation		flexible
Material of the bar		aluminium or steel
Max. temperature	[°C]	with aluminium bars: 100 with steel bars: 250
Fixing of the bar		Screw fixing or wedge lock
Max. bar length*	[mm]	variable* up to 2900

\* The minimum bar lengths depends on the roller spacing G with at least 3 rollers (see page 2)

	a	b	c	h min.	h max.	n max.
<b>22 H12</b>	37 <sup>+3</sup>	16 <sup>+2</sup>	<b>38</b>	45	1.6	
<b>28 H12</b>	46 <sup>+4</sup>	20 <sup>+2</sup>	<b>48</b>	56	1.6	
<b>36 H12</b>	56 <sup>+4</sup>	25 <sup>+3</sup>	<b>61</b>	71	2.5	

Dimensions in mm

**h<sub>min.</sub>** = minimum dimension as per DIN 650

**Roller orientation**

The carrying rollers can be mounted in longitudinal direction of the roller bar (0° = standard) or in transverse direction (90°). Please specify the orientation of the carrying roller.

e.g. **X = 90°**

**Technical data**

Slot width (a)	[mm]	18	22	28	36	13/16"	1 1/16"

N	[mm]	12.5	15	25	27.5	12.5	15

\*) L min. depends on the roller spacing G with at least 3 rollers

\*\*) only with steel bars

**Product configurator**

For the selection and configuration of roller and ball bars, a product configurator is available on our website. After entering the parameters, the configurator determines the desired roller or ball bars with all technical data and the identification number of the characteristics which are identical with the order number. In addition, a drawing with all dimensions will be provided.

Link to the configurator:

[www.roemheld-gruppe.de/productconfigurator/?lang=en](http://www.roemheld-gruppe.de/productconfigurator/?lang=en)

## Code for part numbers Variant program

Roller bars with spring pack are individually configured and manufactured depending on the application. Within the limits specified in the measurement chart, the following parameters can be selected based on a code for part numbers: **bar material, slot width, bar lengths, fixation, slot depth, roller spacing and roller orientation.**

• **Bar material/operating temperature**

Aluminium or steel can be selected as bar material. For operating temperatures >100 °C, a steel version is required. Depending on the temperature range, the admissible carrying force of the roller bars is reduced:

- up to 100 °C: 100 % of the carrying force
- >100 – 150 °C: 95 % of the carrying force
- >150 – 200 °C: 70 % of the carrying force
- >200 – 250 °C: 60 % of the carrying force

**e.g. steel up to 200 °C with 70 % of the carrying force**

• **Slot width (a)**

Selection from the table on page 2

**e.g. a = 36 mm**

• **Bar lengths (L)**

Depending on the roller spacing (G) and the parameter (M) results the possible bar length. Indicate the desired length (e.g. bed length) for your roller bar. Please note that a roller bar must be equipped with at least 3 rollers.

**e.g. L = 1380 mm**

• **Fixation**

- K = wedge lock
- S = screw fixing

**e.g. screw fixing = S**

• **Roller spacing (G) or load of the bar**

By changing the spacing of the rollers, the load of the roller bar can be varied. Please note that the load is indicated for the full length of the bar. Therefore, both the load and the roller spacing must be selected to suit the die weight and the die supporting length. Please indicate the desired roller spacing or load of the ball bar, or the maximum die weight and the die dimensions.

**e.g. G = 35 mm**

or **load per bar = 92.1 kN**

or **number of rollers = 38**

or **die weight and exterior dimensions**

• **Slot depth (h)**

If the slots in your application are lower than the default value, specify the corresponding dimension (up to h min.) For slots which are deeper than the default value, spacer bars can be inserted. For steel versions, specify the corresponding dimension (up to h max.).

**e.g. h = 45 mm**

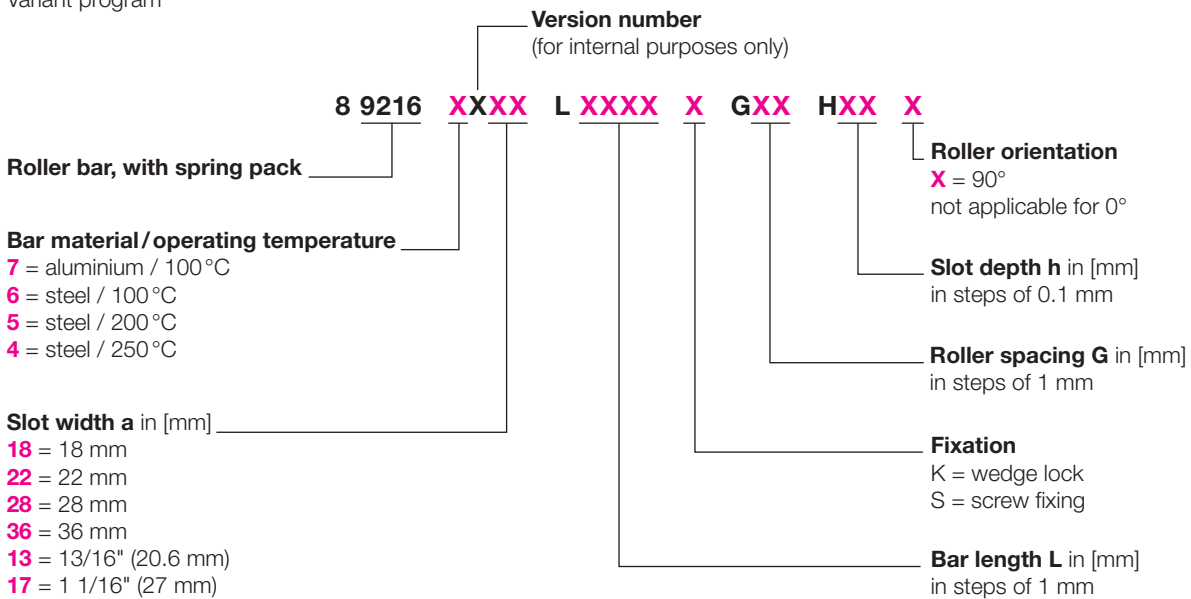

• **Roller orientation**

The carrying rollers can be mounted in longitudinal direction of the roller bar (0° = standard) or in transverse direction (90°). Please specify the orientation of the carrying roller.

**e.g. X = 90°**

### Code for part numbers

Variant program

Page 4 shows an example of the part numbers for aluminium bars with standard roller spacing “G” and standard slot depth “h”.

### Example of ordering

**Extract from the possible variants for roller bars  
with standard roller spacing "G", standard slot depth "h" and bar material aluminium**

**for slot width a = 18 mm**
